GAU 19455

#### IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of:

Attorney Docket No.: Muller-17

Peter Finsmans and Christina Diblitz

Serial No.:

09/509,400

Filing Date:

June 19, 2000

Aluminium Acetoacetate Compounds,

the Production and Use Thereof as

Printing Ink Additives

Art Unit No.: 1713

#### TRANSMITTAL LETTER

**Assistant Commissioner for Patents** Washington, D.C. 20231

Sir:

Enclosed for filing in the above-identified application is the English translation of the International Preliminary Examination Report that has issued in parent International Application No. PCT/DE98/02860. The Assistant Commissioner is authorized to debit any fees that may due in connection with filing this document to Deposit Account No. 02-4345. This authorization is provided in duplicate.

Respectfully submitted,

arnes Bushman Reg. No. 24,810

Browning Bushman

# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/DE 98/02860

V.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1.	Statement			
	Novelty (N)	Claims	1-14	YES
		Claims		NO NO
	Inventive step (IS)	Claims		YES
		Claims	1-14	NO NO
	Industrial applicability (IA)	Claims	1-14	YES
		Claims		NO

2. Citations and explanations

D1: GB-A 772 144

D2: US-A-4 264 370

#### Novelty

The subject matter of Claims 1-14 of the present application is novel over the presently available prior art (PCT Article 33(2)).

The subject matter of the present application concerns compositions containing:

- (A) one or more aluminium compounds having three ligands of general Formula (I) (beta-ketocarboxylic compounds) per aluminium atom; and
- (b) one or more glycol ether compounds as per Claims 1-7 and 10, their preparation as per Claims 8 and 9 and their use as ink additives as per Claims 11-14.

D1 describes mixtures containing aluminium alkyl acetoacetate compounds and glycol compounds or polyalkylene glycols that are useful as ink additives and differ from the subject matter of the present application in that the aluminium compounds always contain at least one alcoxylate group (see D1, page 1, right-hand column,

International application No. PCT/DE 98/02860

lines 56-69 and line 76 to page 2, left-hand column, line 43, and right-hand column, lines 75-78). D2 likewise describes mixtures containing aluminium and glycol compounds as ink additives (Claim 1, the examples and column 3, lines 8-57); it does not explicitly mention the compositions according to the application.

The subject matter of Claims 1-14 of the present application is therefore novel.

#### Inventive step

However, the subject matter of Claims 1-14 of the present application does not appear to be inventive (PCT Article 33(3)).

In view of the closest prior art in D1 and D2, the application is considered to address the problem of providing further compositions useful as ink additives containing aluminium and glycol ether.

This problem is solved by the compositions as per Claims 1 and 7 of the application (see the examples).

D2 discloses mixtures containing aluminium and glycol compounds as suitable ink additives, and also proposes trisubstituted compounds, inter alia, as preferred aluminium compounds (see D2, column 3, lines 30-46). Consequently, the solution proposed in the application, namely that of providing compositions containing aluminium and glycol compounds (I) trisubstituted with ligand (I) as per Claim 1, appears to be already suggested by D2 to a person skilled in the art.

The subject matter of the present application therefore does not appear to involve an inventive step.
